I claim:

1. (AMENDED) A user interface for controlling peripheral devices comprising:

    a peripheral option display for presenting peripheral options to a user immediately

following selection of the peripheral device from a command bar icon, wherein said peripheral

5   option display includes a peripheral device user interface.

2. The interface of claim 1 which includes a bypass function for de-selecting said

peripheral option display.

10 3. (AMENDED) A user interface for controlling peripheral devices comprising:

    a peripheral driver which automatically displays peripheral options in a peripheral

option display including a peripheral device user interface to a user immediately following

selection of a peripheral device icon from a command bar.

15 4. The interface of claim 3 which includes a bypass function for de-selecting said

peripheral option display.

5.   (AMENDED) A user interface for controlling peripheral devices comprising:

a peripheral driver which presents, upon selection of a peripheral device icon, a

peripheral option display including a peripheral option user interface; and

a bypass function for de-selecting said peripheral option display.
